What Every Small Business Owner Must Know About Protecting And Preserving Their Company's Critical Data And Computer Systems

If You Depend On Your Computer Network To Run Your Business, This Is One Report You DON'T Want To Overlook!

This report will outline in plain, non-technical English, common mistakes that many small business owners make with their computer network that cost them thousands in lost sales, productivity, and computer repair bills, as well as providing an easy, proven way to reduce or completely eliminate the financial expense and frustration of these oversights.

You'll Discover:

- The single most expensive mistake most small business owners make when it comes to protecting their company data.
- The universal misconception business owners have about their computer networks, and how it can end up costing between \$9,000 to as much as \$60,000 in damages.
- 6 Critical security measures every small business should have in place, at a minimum.
- How to greatly reduce – or even completely eliminate – frustrating crashes, slow performance, and other annoying computer problems.
- How to avoid expensive computer repair bills and get all the computer support you need for a low, fixed monthly rate.

Dear Colleague,

Have you ever lost an hour of work on your computer?

Now imagine if you lost days or weeks of work – or imagine losing your client database, financial records, and all of the work files your company has ever produced or compiled.

Imagine what would happen if your network went down for days, where you couldn't access email or the information on your PC. How frustrating would that be?

Or, what if a major storm, flood, or fire destroyed your office and all of your files? Or if a virus or Ransomware infection wiped out your server...do you have an emergency recovery plan in place that you feel confident in?

How quickly do you think you could recover, if at all?

Many small business owners tend to ignore or forget about taking steps to secure their company's network from these types of catastrophes until disaster strikes. By then it's too late and the damage is done.

But That Could Never Happen To Me!

(And Other Lies Business Owners Like To Believe About Their Businesses...)

After working with over 500 small and mid-size businesses in the Toronto area over the past 30 years, we've found that 6 out of 10 businesses will experience some type of major network or technology disaster that will end up costing them between \$9,000 and \$60,000 in repairs and restoration costs *on average*.

That doesn't even include lost productivity, sales, and client goodwill that can be damaged when a company can't operate or fulfill on its promises due to technical problems.

While it may be difficult to determine the actual financial impact computer problems have on your business, you can't deny the fact that they do have a negative effect. If you've ever had your business grind to a screeching halt because your server crashed, you must have some idea of the frustration and financial loss to your business even if you haven't put a pencil to figuring out the exact cost.

Most Computer Problems Are Hidden And Strike Without Warning, And At The Most Inconvenient Times

Hardware failure, viruses, malware, and other problems usually aren't detectable until they strike by causing a server to go down, data to be lost, or some other catastrophe. Viruses and malware are particularly sneaky because they are designed to hide themselves while they do their damage. For example, malware can secretly transmit information about you and your company to an outsider without being visible to you.

Even if your network was recently audited by a computer consultant, viruses, malware, and hackers are constantly attacking your network (that is why we monitor our clients' networks 24/7 - because you never know when a new virus is going to strike).

Unfortunately, many computer consultants offer only "break-fix" services. That basically means when something breaks or stops working, they come in and fix it. While this may seem like a good setup for you, it actually leaves you wide open to a number of threats, problems, and other disasters because it is *reactive* rather than *proactive* maintenance.

Take a look at these statistics:

- Companies experience an average of 501 hours of network downtime every year, and the overall downtime costs an average of 3.6% of annual revenue. (*Source: The Costs of Enterprise Downtime, Infonetics Research*)
- 93% of companies that lost their data center for 10 days or more due to a disaster filed for bankruptcy within one year of the disaster, and 50% filed for bankruptcy immediately. (*Source: National Archives & Records Administration in Washington.*)
- 20% of small to medium businesses will suffer a major disaster causing loss of critical data every 5 years. (*Source: Richmond House Group*)
- This year, 40% of small to medium businesses that manage their own network and use the Internet for more than email will have their network accessed by a hacker, and more than 50% won't even know they were attacked. (*Source: Gartner Group*)
- Cyber-criminals stole an average of \$900 from each of 3 million Americans in the past year, and that doesn't include the hundreds of thousands of PCs rendered useless by spyware. (*Source: Gartner Group*)

What These Failures Are REALLY Costing Your Business

Even if you don't factor in the soft costs of lost productivity, there is a hard cost of repairing and restoring your network. Most major network repairs will require a minimum of four to eight hours, on average, to get the network back up and running. Plus, most

Connectability | 970 Lawrence Ave W, Suite 402 | Toronto, ON M6A 3B6
Website: www.connectability.com | Phone: 647-930-2250

consultants cannot get on-site to resolve the problem for 24 to 48 hours. That means your network could be down for one to two days.

Since the average computer consultant charges over \$100 per hour plus a trip fee and a surcharge if it's an emergency, the average cost of these repairs is \$600 to \$1,000; and that doesn't even include any software or hardware costs that may also be required. Over a year, this results in \$1,800 to \$3,000 in costs without even considering hardware and software costs, other IT repairs, or the soft costs of lost sales, lost productivity and lost opportunities from new customers. Of course, those numbers quickly multiply with larger, more complex networks.

What's most exasperating about this situation is that 100% of these disasters and restoration costs could have been completely avoided or greatly mitigated easily and inexpensively with a little planning and proactive maintenance.

Why Small Business Are Especially Vulnerable To These Disasters

With the constant changes to technology and the daily development of new threats, it takes a highly trained technician to maintain even a simple 3 to 5 person network; however, the cost of hiring a full-time, experienced technician is just not feasible for most small business owners.

In an attempt to save money, most try to do their own in-house IT support and designate the person with the most technical expertise as the part-time IT manager. This never works out because this makeshift IT person has another full-time job to do and is usually not skilled enough to properly support an entire computer network anyway.

This inevitably results in a network that is ill-maintained and unstable. It also means that the backups, virus updates, and security patches are not getting timely updates, giving you a false sense of security.

It's only a matter of time before the network crashes. If you're lucky, it will only cost you a little downtime; but there's always a chance you could end up like one of these companies:

Large distributor saves \$50, then loses \$150,000 due to printer problem

A large distributor decided to save money by buying a printer for their warehouse online. When it arrived, they installed it themselves, plugging it directly into a power outlet, rather than a surge suppressor or UPS. A few months later, a power surge caused that printer to start flooding their network with huge volumes of packets.

By the time they called us and we located the problem, nearly 2 days had elapsed, costing the company \$10,000 per hour of lost productivity and orders.

Connectability | 970 Lawrence Ave W, Suite 402 | Toronto, ON M6A 3B6
Website: www.connectability.com | Phone: 647-930-2250

Preventing this disaster would have only cost them \$45 – the price of a surge suppressor. Instead, they lost a whopping \$150,000 in late and missed orders, plus lost productivity from their large warehouse staff.

Jewelry Manufacturer loses 3 months of work

A local jewelry manufacturer chose to ignore the renewal warnings for their AntiVirus software. They also declined our offer to implement a **cloud**-based backup solution. One day, they arrived in their office to discover that the computer which held their critical order database had been attacked by **Ransomware** and they could no longer access their database.

When they contacted us to recover the data from the system backups (which they decided to manage themselves), we found that the most recent backup was at least 3 months old. Because they were worried about the cost of an automated backup (at **less than \$50 per month**), they lost 3 months' worth of orders. They also incurred several thousand dollars in other services to get their network stabilized.

Had their network been properly monitored, we would have been able to see that backups were not running and that computers were not protected. This would have prevented the infection, the downtime, and the costs to get them back up and running, not to mention the days of lost productivity while they had to reconstruct their data.

Property Management Company Spends \$9,000 And Weeks Of Downtime For A Simple Inexpensive Repair

A 10-user property management company was not monitoring or maintaining their server. Due to the overuse and lack of maintenance, it started to degenerate and eventually shut down under the load. This caused their entire network to be down for two full days and cost them \$3,000 in support fees to get them back up and running. Naturally the costs were much higher when you factored in the lost productivity of their ten employees during that time.

This client did not want to implement a preventative maintenance program, so the same problem happened again two months later, costing them another \$3,000 and two days of downtime.

Six months later it happened yet another time bringing their total to \$9,000 in hard costs, plus tens of thousands in productivity costs for a problem that could have been quickly detected and prevented from happening.

Six Things You Must Do At A Minimum To Protect Your Company From These Types Of Disasters:

While it's impossible to plan for every potential computer problem or emergency, a little proactive monitoring and maintenance of your network will help you avoid or greatly reduce the impact of the vast majority of computer disasters you could experience.

Unfortunately, I have found that most small business owners are NOT conducting any type of proactive monitoring or maintaining their network, which leaves them completely vulnerable to the types of disasters you just read about. This is primarily for three reasons:

#1. They don't understand the importance of regular maintenance.

#2. Even if they DID understand its importance, they simply do not know what maintenance is required or how to do it.

#3. They are already swamped with more immediate day-to-day fires demanding their attention. If their network is working fine today, it goes to the bottom of the pile of things to worry about. That means no one is watching to make sure that backups are working properly, the virus protection is up to date, that critical security patches are being applied, or that the network is "healthy" overall.

While there are over 31 critical checks and maintenance tasks that need to be performed on a daily, weekly, and monthly basis, I'm going to share with you the 6 that are most important for protecting your company.

Step#1: Make Sure You Are Backing Up Your Files Every Day

It just amazes me how many businesses never back up their computer network. Imagine this: you write the most important piece of information you could ever write on a chalkboard and I come along and erase it. How are you going to get it back? You're not. Unless you can remember it, or if YOU MADE A COPY OF IT, you can't recover the data. It's gone. That is why it is so important to back up your network. There are a number of things that could cause you to lose data files. If the information on the disk is important to you, make sure you have more than one copy of it.

Step #2: Check Your Backups On A Regular Basis To Make Sure They Are Working Properly

This is another big mistake I see. Many business owners set up some type of backup system, but then never check to make sure it's working properly. It's not uncommon for a system to APPEAR to be backing up when in reality, it's not. There are dozens of things that can go wrong and cause your backup to become corrupt and useless. That is why it's not

enough to simply back up your system; you have to check it on a regular basis to make sure the data is recoverable in the event of an emergency. Remember the Jewelry Manufacturing Company that THOUGHT their information was backed up? Don't let that happen to you.

Step #3: Keep An Offsite Copy Of Your Backups

What happens if a fire or flood destroys your server AND the backup drive? This is how hurricane Katrina devastated many businesses that were then forced into bankruptcy. What happens if your office gets robbed and they take EVERYTHING? It sounds unlikely, but we've seen it happen. Having an offsite backup is simply a smart way to make sure you can get your business back up and running in a relatively short period of time.

Step #4: Make Sure Your Virus Protection Is ALWAYS On AND Up-To-Date

You would have to be living under a rock to not know how devastating a virus can be to your network. With virus attacks coming from spam, downloaded data and music files, instant messages, web sites, and emails from friends and clients, you cannot afford to be without up-to-date virus protection.

Not only can a virus corrupt your files and bring down your network, but it can also hurt your reputation. If you or one of your employees unknowingly spreads a virus to a customer, or if the virus hijacks your email address book, you're going to make a lot of people very angry.

Step #5: Set Up And Properly Configure A Firewall

Small business owners tend to think that because they are "just a small business", no one would waste time trying to hack into their network, when nothing could be further from the truth. I've conducted experiments where I connected a single computer to the Internet with no firewall. Within hours, over 13 gigabytes of space was taken over by malicious code and files that I could not delete. The simple fact is that there are thousands of unscrupulous individuals out there who think it's fun to disable your computer just because they can.

These individuals strike randomly by searching the Internet for open, unprotected ports. As soon as they find one, they will delete files or download huge files that cannot be deleted, shutting down your hard drive. They can also use your computer as a zombie for storing pirated software or sending spam, which will cause your ISP to shut YOU down and prevent you from accessing the Internet or sending and receiving email.

If the malicious programs can't be deleted, you'll have to re-format the entire hard drive causing you to lose every piece of information you've ever owned UNLESS you were backing up your files properly (see 1 to 3 above).

Step #6: Update Your System With Critical Security Patches As They Become Available

If you do not have the most up-to-date security patches and virus definitions installed on your network, hackers can access your computer through a simple banner ad or through an email attachment.

Not too long-ago Microsoft released a security bulletin about three newly discovered vulnerabilities that could allow an attacker to gain control of your computer by tricking users into downloading and opening a maliciously crafted picture. At the same time, Microsoft released a Windows update to correct the vulnerabilities; but if you didn't have a process to ensure you were applying critical updates as soon as they become available, you were completely vulnerable to this attack.

In June, 2019 Tripwire reported that, based on a survey of 340 information security professionals, that *27%* of organization worldwide had reported that they have been breached because of unpatched vulnerabilities.

Here's another compelling reason to ensure your network stays up-to-date with the latest security patches...

Most hackers do not discover these security loopholes on their own. Instead, they learn about them when Microsoft (or any other software vendor for that matter) announces the vulnerability and issues an update. That is their cue to spring into action and they immediately go to work to analyze the update and craft an exploit (like a virus) that allows them access to any computer or network that has not yet installed the security patch.

In essence, the time between the release of the update and the release of the exploit that targets the underlying vulnerability is getting shorter every day.

This is an old example, but it's still relevant today. When the "nimda" worm was first discovered back in the fall of 2001, Microsoft had already released the patch that protected against that vulnerability *almost a year before* (331 days). So, network administrators had plenty of time to apply the update. Of course, many still hadn't done so, and the "nimda" worm caused lots of damage. But in the summer of 2003 there were *only 25 days* between the release of the Microsoft update that would have protected against the "blaster" worm and the detection of the worm itself!

Unfortunately, a survey in 2018 of almost 3,000 security professionals in nine countries shows that the average timeline for most organizations to patch their systems is between 12 and 16 days, and *60% of breaches* were linked to a vulnerability where a patch was available, but not applied.

Clearly, *someone* needs to be paying close attention to your systems to ensure that critical updates are applied as soon as possible. That is why we highly recommend small business

Connectability | 970 Lawrence Ave W, Suite 402 | Toronto, ON M6A 3B6
Website: www.connectability.com | Phone: 647-930-2250

owners without a full-time IT staff allow their consultant to monitor and maintain their network.

Announcing A Simple And Easy Way To Ensure These Disasters Don't Happen To Your Business:

If you are sitting there thinking, "This all sounds great, but I don't have the time or the staff to handle all of this work," I've got the solution.

Thanks to a service we offer called Managed Services, we can completely take over the day-to-day management and maintenance of your computer network and **free you from expensive, frustrating computer problems, downtime, and security threats**. You'll get all the benefits of a highly trained, full-time IT department at only a fraction of the cost.

And here is the best part...

In many cases, we can cut your IT support costs by 15% to 30% WHILE improving the reliability and performance of your network and eliminating spyware, spam, downtime, and other computer frustrations!

The Benefits Are Obvious:

- **You'll eliminate expensive repairs and recovery costs.** Our network monitoring and maintenance will save you money by preventing expensive network disasters from ever happening in the first place.
- **You'll avoid expensive trip fees while receiving faster support.** Our remote monitoring software will enable us to access and repair most network problems right from our offices. No more waiting around for an engineer to show up! And if you need an engineer on-site, no problem. We don't charge extra for onsite support.
- **How does faster performance, fewer "glitches", and practically zero downtime sound to you?** Under this program, that is exactly what we'll deliver. Some parts of your system will degrade in performance over time, causing them to slow down, hang up, and crash. Our preventative maintenance and network monitoring will make sure your computers stay in tip-top shape for maximum speed, performance, and reliability.
- **You will have ALL of the benefits of an in-house IT department WITHOUT all of the costs.** As a Managed Services Plan customer, you'll have access to a knowledgeable support staff that can be reached immediately should you have any kind of problem or question.

- **You'll receive substantial discounts** on IT services that you are already buying. Most IT firms will nickel and dime you over every little thing they do; under this program, you'll pay one flat, affordable rate and get all of the technical support you need. No hidden charges, caveats, or disclaimers.
- **You will never have to fear a big, expensive network repair bill.** Instead, you can budget for network support just like rent or insurance.
- **You'll sleep easier** knowing the "gremlins at the gate" are being watched and kept out of your network.
- **You'll safeguard your data.** The data on your computer and server is always more important than the hardware that houses it. If you rely on your computer systems for daily operations, it's time to get serious about protecting your critical, irreplaceable electronic information.
- **You'll finally put a stop to annoying spam, pop-ups, and malware** taking over your computer and your network.
- **You'll gain incredible peace of mind.** As a business owner, you already have enough to worry about. We'll make sure everything pertaining to your network security and reliability is handled so you don't have to worry about it.

How Disaster-Proof Is YOUR Network? FREE Security Audit Reveals The Truth

Hopefully this report acted as an eye opener to all small business owners who are not adequately protecting their data and computer network. If you are not doing the 6 steps outlined in this report, your network is an accident waiting to happen and the most important thing for you to do now is take immediate action towards protecting yourself.

One of the biggest, costliest mistakes you can make is to ignore this advice with the false hope that such a disaster could never happen to **you**.

Because you have taken the time to request and read this report, I would like to offer you a FREE Network Security Audit. Normally I charge \$697 for this service, but as a prospective client, I'd like to give it to you for free as a way of introducing our Managed Services program to your company.

During this audit I will come on-site and...

- ✓ **Pinpoint any exposure to or risk** from hackers, viruses, malware, spam, data loss, power outages, system downtime, and even employee sabotage.
- ✓ **Review your system backups** to make sure the data CAN be recovered in case of a disaster. You don't want to discover that your backups were corrupt AFTER a major disaster wiped out your network.
- ✓ **Scan your network for hidden malware and viruses** that hackers "plant" in your network to steal information, deliver spam, and track your online activities.
- ✓ **Look for hidden problems that cause error messages, slow performance, and network crashes.**
- ✓ **Answer any questions you have** about your network or keeping it running problem free. I can also give you a second opinion on any projects you are considering.

There Are No Strings Attached, But You Have To Hurry...

As you might have guessed, I cannot extend this offer forever, because time and staff limitations simply won't allow it.

If you want to say goodbye to your computer problems and stop worrying about the security of your data from hardware failures, viruses, hackers, and other threats, then you'll want to sign up right now for this Free Network Security Audit.

There is absolutely no obligation or pressure for you to buy anything, or to ever use our services again. As I stated earlier, this is simply an easy way for us to demonstrate how we can help your business at no risk to you.

How To Secure Your Free Network Security Audit

1. Call me direct at 647-930-2250
2. Send an email to info@connectability.com with the words, "Security Audit" in the subject line. Be sure to include your company name, address, and phone number so a member of my team can follow up with you.
3. Go to [Contact Us - Connectability Inc.](#) and enter your information. A member of our team will follow up with you shortly to schedule your appointment.

Connectability | 970 Lawrence Ave W, Suite 402 | Toronto, ON M6A 3B6
Website: www.connectability.com | Phone: 647-930-2250

Dedicated to your success,
Brad Shafran, President
www.connectability.com
647-930-2250
970 Lawrence Ave W, Suite 402, Toronto

P.S. Please note that this offer for a **FREE Security Audit won't be around forever.** While we would love to be able to give these away to everyone, staff and time limitations simply won't allow it. We can only conduct this Audit for the first **5 companies** that reach out. So, if you are concerned about your network security or reliability, call NOW!

You have my word that you will not be under any pressure or obligation to buy anything, or to ever use our services again.

Here's What Our Clients Are Saying About Us:

“Proactive, Reliable IT Support That Nonprofits Can Trust”

We are a small, nonprofit arts service organization and Connectability's IT support services have been of great benefit to our team. They are responsive to our needs, and we always feel comfortable reaching out because we know Connectability will be prompt and helpful in providing an effective solution. They are also proactive in identifying potential areas of improvement and suggesting IT solutions before major issues arise. Their team is professional, reliable and knowledgeable in all areas of IT support. We highly recommend their services.

Diane Davy Executive Director
Work in Culture

“Their Responsive Local IT Support Keeps our Manufacturing Operations Running Smoothly”

As a small business, we don't have the resources for a full-time IT staff, so having Connectability by our side has been a game-changer. Their team provides responsive and professional technical support exactly when we need it, without the overhead. Since we specialize in manufacturing, it's crucial for our operations to stay uninterrupted, and Connectability's local support is always available. They consistently deliver with quick response times and on-site support whenever needed. I'd absolutely recommend them for the value, service quality, and peace of mind they bring.”

Scott Jones General Manager
KB Components Toronto Inc.

“Connectability is A Trusted IT Partner That Feels Like Part of Our Own Team”

Since Connectability took over our IT, the biggest benefit has been their responsiveness. Working with them feels like having an extension of our own team—someone who not only knows what they're doing but also guides us through challenges with confidence and expertise. What sets Connectability apart is their proactive approach to minimizing risk. They don't just react to issues; they help prevent them before they occur. Their efforts to educate our team, like weekly cybersecurity emails and simulated phishing tests, have been

Connectability | 970 Lawrence Ave W, Suite 402 | Toronto, ON M6A 3B6
Website: www.connectability.com | Phone: 647-930-2250

invaluable in reducing risks and improving our overall security. We've worked with other IT firms in the past, but Connectability is the best fit by far. Their combination of proactive guidance, effective issue resolution, and day-to-day responsiveness makes them an exceptional partner for any business.

Brian Leon CEO
Choice Hotels Canada

“In our experience of working with Connectability, we have found them to be unfailingly honest, responsive and reliable”

That level of trust has really given me the peace of mind that our IT operations are being taken care of effectively. I also feel like they really have our best interest in mind – something you don't get from every IT provider. If you have any doubts, I recommend reaching out to their CEO Ted and scheduling a call!

Michael Elman CEO
Plastic Dress-Up Inc
